SUBHRANSHU MOHAPATRA

Chandler, AZ | (480) 531-3736 | subhranshu497@gmail.com LinkedIn Profile

PROFESSIONAL SUMMARY

Senior Software Engineer with **15+ years of experience** specializing in architecting scalable, distributed systems and high-throughput microservices. Proven expert in Java, Python, and the AWS ecosystem, with a focus on event-driven architectures (Kafka) and infrastructure automation (Terraform). Accomplished in leading cross-functional teams to deliver mission-critical fraud detection and logistics solutions that optimize performance and reduce operational costs by up to 60%.

TECHNICAL SKILLS

- **Programming Languages:** Java (8/17/22), Python, JavaScript, Groovy.
- **Frameworks & Architecture:** Spring Boot, Spring MVC, Hibernate, MyBatis, Microservices, RESTful APIs, SOAP, Grails.
- **Cloud & DevOps:** AWS, Terraform, GitLab, Jenkins, Maven, Infrastructure as Code (IaC).
- **Messaging & Databases:** Kafka, JMS, Oracle, DynamoDB, SQL.
- **Testing & Tools:** JUnit, JMeter, Git, SVN, Splunk.

PROFESSIONAL EXPERIENCE

Silicon Valley Bank (First Citizens Bank) | Senior Lead Software Engineer | Jul 2021 – Present

- **Distributed Systems Architecture:** Partnered with Product and Design teams to architect scalable microservices for real-time fraud detection.
- **High-Throughput Optimization:** Redesigned service architecture to increase system resiliency, achieving 60% post-deployment cost savings through optimized resource utilization and high availability.
- **Algorithm Efficiency:** Enhanced fraud detection accuracy and backend engineering productivity by 50-60% by implementing reusable data processing patterns.
- **Infrastructure Automation:** Automated large-scale AWS environments using Terraform, reducing manual deployment errors and streamlining release cycles.
- **Observability:** Improved system monitoring by 30-40% using custom Splunk dashboards to track Kafka event flows and identify performance bottlenecks.

Avnet Inc. | Senior Software Engineer | Jul 2019 – Jul 2021

- **Logistics Innovation:** Spearheaded global order movement solutions using Spring Boot, significantly reducing delivery delays through streamlined backend logic.

- **Tooling & Automation:** Engineered reusable audit automation tools, saving 120-160 operational hours per quarter.
- **Interface Development:** Built high-performance inventory dashboards using Java and REST APIs to provide real-time warehouse data efficiency.

Pacific Gas & Electric | Software Engineer | Jul 2010 – Jul 2019

- **End-to-End Ownership:** Developed a customer-facing solar application using Groovy and Grails, resulting in a 40% increase in customer adoption.
- **API Design:** Designed robust RESTful APIs for the Green Button initiative, ensuring secure data sharing across heterogeneous platforms.
- **Secure Integrations:** Integrated complex third-party systems including Braintree payment gateways and Ping Identity for Single Sign-On (SSO).

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate**.
- **AWS Certified Developer – Associate**.
- **AWS Certified Cloud Practitioner**.
- **HashiCorp Certified: Terraform Associate**.
- **Microsoft Certified: HTML5 & CSS3 Developer**.
- **PCEPT – Certified Entry-Level Python Programmer**.

EDUCATION

Bachelor of Technology in Electrical & Electronics Engineering Institute of Technical Education and Research, BPUT – Bhubaneswar, India (2010).

LANGUAGES

English, Hindi, Oriya.
